Description

Hi,

I'm using Extplorer standalone on PHP 5.4.9. If I try to switch to ftp mode, the login windows disappears, but I'm still in extplorer mode. If I click another time on ftp mode, the error "This directory doesn't exist." is shown.

The same setup works fine with PHP 5.3.18.

I found a way to work around this. Uncomment the lines

```
if(!is_dir($abs_dir) && !is_dir($abs_dir.$GLOBALS["separator"])) {
$GLOBALS['ERROR'] = $abs_dir." : ".$GLOBALS["error_msg"]["direxist"];
$dir = $GLOBALS['dir'] = $_SESSION['ext_dir'] = "";
}
```

in extplorer.init.php. I could not figure out why everything works fine with PHP 5.3.
