Description

Hello,

I have installed eXtplorer via apt in Ubuntu 11.04. For the most part, the directory permissions looked to be correct; however, I had to change the directory's owner/group to my systems' web server user. The issue that I am having now is that the username and password combination of admin:admin is not letting me into the system. Any thoughts?

Thanks,

Alex

History

#1 - 05/27/2011 02:06 AM - Alex Ackerman

I found eXtplorer's README.Debian file and followed the instructions to overwrite the .htusers.php file with the example. I was then able to log into the server and make the required security changes.
