

eXtplorer - PHP-based File Manager - Fehler #165

Russian coding

06/30/2014 04:49 PM - Павел Коровьев

Status:	Neu	
Priority:	Hoch	
Assignee:	Sören Eberhardt-Biermann	
Category:	Bug	
Target version:		
eXtplorer Version:	2.1.4	Joomla! Version: none
Description !!Version 2.1.5!! I apologize for translation quality. Extplorer can't work with the Russian signs. At display in a tree of folders and files it them incorrectly codes (on a site to the "http://www .online-decoder.com/ru" decoder CP1163 => UTF-8, though on the server all files in UTF-8). When copying / moving files with Russian names (an example "Привет") gives out a mistake ": Вы должны дать задать имя". At file or folder creation with the Russian symbols at the beginning of the name gives out a mistake "Вы должны дать задать имя" if the first symbol is other than Russian - the file is created but it is wrong (the example "0Привет" is created "0? ? ? ? ? "). The server and PHP for correctness of work checked simple scripts. Both the server and PHP work normally.		

History

#1 - 06/30/2014 08:02 PM - Павел Коровьев

The "basename" function in scripts of ./include/mkitem.php ./include/copy_move.php blocks the Russian signs. However it doesn't solve a problem of creation of the file and its copying and transfer.

#2 - 07/01/2014 08:41 PM - Павел Коровьев

Debugging a script of mkitem.php I found out that get_abs_item () doesn't attach the Russian signs.

#3 - 07/02/2014 08:57 PM - Павел Коровьев

Looking through forums I found out that the "basename" and "mb_detect_encoding" functions incorrectly process the Russian signs. Therefore many functions work incorrectly. For work it is necessary to replace these two unstable functions.

#4 - 07/03/2014 08:56 PM - Павел Коровьев

The "ext_copy_move_items" function works incorrectly. When determining directory existence ("if (! @ \$GLOBALS ['ext_File']-> file_exists (dirname (get_abs_dir (\$new_dir))))") occurs a mistake.

#5 - 07/06/2014 09:14 AM - Павел Коровьев

click&drope function contains the coding converter that distorts the Russian coding, but I haven't enough knowledge of PHP to define where it is. After copying the file has no owner and his right (-----).
