Description			
<p>Hi I am using Watchful.li to monotor several Joomla 1.5, 2.5 & 3.4 websites.</p> <p>It has a Malware scan where (described as "detects malware signatures, deep level scan that detects malware signatures in the file system of the website")</p> <p>After teh Malware scan it returns 2 "Files to check" with the following info</p> <p>Path: /administrator/components/com_extplorer/index.php Pattern: header('Location: <a .\$_server['http_host']"="" href="http://">http://".\$_SERVER['HTTP_HOST']) Reason: Possible PHP injection (redirect)</p> <p>Path: /administrator/components/com_extplorer/libraries/HTTP/WebDAV/Server/FileSystem.php Pattern: popen("file -i '\$fspath' 2>/dev/null", "r") Reason: Possible PHP Injection (Unix command)</p> <p>Can you please let me know if code in these files are secure & the Watchful.li Malware Scan is just being over cautious.</p> <p>I am using extplorer version 2.1.7</p> <p>Thank you for taking a look at this!</p>
