Description

I attempted a New install of eXtplorer_2.1.0RC3 to a newly created folder under my
-First I created a folder/directory called "fm" under /public_html/domain/
-Second I changed the permissions of the directory "fm" to 777
-Third I FTP'd all the files to "fm".
-Forth I made sure that the permissions for public_html/domain/fm/ftp_tmp was set to 777
-Fifth I set permissions for public_html/domain/fm/config/.htusers.php to 666

After the above was done I attempted to navigate to the login screen by going to the following urls:
www.domain.us/fm I also tried www.domain.us/fm/index.pdp

I cannot seem to get the login screen to come up. (****I did got it to come up once, but it seemed that it got hung, so I went to the
process manager and killed all processes
The only processes showing up under the process manager were "pure-ftpd (IDLE)", and I am not sure if they are related to you or to
the FTP clients that I was using to upload the files.

I also attempted a second installation to a newly created directory, and still no luck.

Thanks for your help with this.
