

eXtplorer - PHP-based File Manager - Fehler #58

svn not available via cleint

03/05/2012 07:51 PM - Christopher West

Status:	Gelöst	
Priority:	Normal	
Assignee:	Christopher West	
Category:	Bug	
Target version:		
eXtplorer Version:		Joomla! Version:
Description		
<p>Hello,</p> <p>I am trying to download the svn version (3.0) in trunk and my svn client (tortoisesvn (windows 7 integrated))state that it your url does not exist/connect. I would like to look at the code and learn how you have done this great work.</p> <p>I'm trying "EXPORT" command to bring your code to my local svn. Is this correct(very little experience with versioning software/systems)or is it "IMPORT" which also said the same thing?</p> <p>Thank you</p> <p>Christopher M West</p>		

History

#1 - 03/19/2012 01:49 PM - Dinesh Kesarwani

Try to <https://extplorer.net/svn/extplorer/trunk/>

#2 - 03/29/2012 12:58 PM - Sören Eberhardt-Biermann

It seems as if the SSL-certificate used on extplorer.net has expired.
I will update the certificate, so you can connect via HTTPS again.
