

eXtplorer - PHP-based File Manager - Fehler #94

Joomla 3.0 error - Undefined JComponentTitle

12/16/2012 10:42 PM - Duke Speer

Status:	Neu	
Priority:	Normal	
Assignee:		
Category:		
Target version:		
eXtplorer Version:		Joomla! Version:
Description		
New install in Joomla 3.0.2 - two issues		
1) Installer does not set Component Title property in database. Error - "Undefined property JAdministrator::\$JComponentTitle"		
2) Windows for displaying file are out of the flow, covering the error-reporting area. Component's CSS needs to not be positioned absolute - allow error display to push windows down. Attempts to drag top edge of windows does not open up error area - resizes area above.		
See screenprint.
