

eXtplorer - PHP-based File Manager - Fehler #94

Joomla 3.0 error - Undefined JComponentTitle

12/16/2012 10:42 PM - Duke Speer

Status: Neu	
Priority: Normal	
Assignee:	
Category:	
Target version:	
eXtplorer Version: 2.1.4	Joomla! Version: Joomla! 3.1
Description	
New install in Joomla 3.0.2 - two issues	
1) Installer does not set Component Title property in database. Error - "Undefined property JAdministrator::\$JComponentTitle"	
2) Windows for displaying file are out of the flow, covering the error-reporting area. Component's CSS needs to not be positioned absolute - allow error display to push windows down. Attempts to drag top edge of windows does not open up error area - resizes area above.	
See screenprint.
