eXtplorer - PHP-based File Manager - Fehler #94

Joomla 3.0 error - Undefined JComponentTitle

12/16/2012 10:42 PM - Duke Speer

Status:	Neu		
Priority:	Normal		
Assignee:			
Category:			
Target version:			
eXtplorer Version:		**Joomla! Version:**	

Description

New install in Joomla 3.0.2 - two issues

1) Installer does not set Component Title property in database.
Error - "Undefined property JAdministrator::$JComponentTitle"

2) Windows for displaying file are out of the flow, covering the error-reporting area.
Component's CSS needs to not be positioned absolute - allow error display to push windows down. Attempts to drag top edge of windows does not open up error area - resizes area above.

See screenprint.
